Permanent Link to Taoglas launches street-view-ready GPS performance certification services

2021/03/30

Taoglas, a provider of Internet of Things (IoT) and GNSS antenna products, has released two new GPS certification testing services for Google and its device partners. The services are required for devices to meet Google's new Street View auto-ready standard. Auto-ready certification distinguishes 360-degree cameras that deliver accurately positioned 360 video, even at high speeds. Taoglas worked with Google to develop the performance requirements, as well as the test methodology used to establish a basic minimum level of GPS receiver performance. The services are available at any of Taoglas' design centers and labs in the United States, Ireland, Germany and Taiwan. Compact wireless devices such as digital cameras with built-in GPS receiver systems contain complex electronic systems that can emit unwanted RF signals that can impact radio receiver performance. The effect of this RF noise can be combated with critical design decisions like the antenna, low noise amplifier, filters, and transmission line choice and implementation. Taoglas' new services will help device manufacturers objectively measure real-world performance to understand any GPS performance issues with their products. With this information, product manufacturers will know if their performance is optimized and will meet or exceed user expectation for the application at hand, as well as how it compares with their competitors. "Google Street View provides people with a 360-degree view of the world, and to enable these services, we require highly accurate location data," said Charles Armstrong, product manager at Google. "By working with Taoglas to establish a standardized compliance process, we're helping device manufacturers understand our requirements for GPS performance and quickly deliver products that match and exceed those high performance standards." Taoglas is offering two levels of certification testing: Street View Auto-Ready Conformance Testing (GSA.31) provides a quick verification of minimum performance (in a pass/fail manner) required to achieve Street View certification. Taoglas uses its GPS constellation simulator and anechoic chamber to verify that radiated tracking and acquisition sensitivity meet a minimum performance standard at 15-degree intervals in one hemisphere. From these test results, manufacturers will be able to clearly see if the device's GPS is performing adequately for basic location capabilities. The condensed period needed to run this test provides device manufacturers the best value to

answer the question, "Is the GPS working optimally?" A street view image of Guatemala. (Credit: Google) Street View Auto-Ready Performance Testing (GSA.32) provides an absolute level of testing to assess the GPS receiver performance according to the optional Google Street View Assessment test procedures. Taoglas uses its GPS constellation simulator and anechoic chamber to measure radiated tracking and acquisition sensitivity at 15-degree intervals in one hemisphere. These optional tests provide more insight into how well a device performs, providing absolute receive sensitivity performance data. Testing results for both services include suggestions on next steps to resolve identified issues. "This partnership with Google to deliver GPS testing solutions for Google Street View compliance is an excellent example of how we're working successfully with the world's biggest companies to delivering high-quality, reliable antenna solutions," said Dermot O'Shea, co-CEO of Taoglas. "By certifying their products through Taoglas, device manufacturers will also be able to take advantage of Taoglas' deep RF expertise, achieving success quickly and reducing time to market." jammer 4g portable

110 - 220 v ac / 5 v dcradius.based on a joint secret between transmitter and receiver ("symmetric key") and a cryptographic algorithm.the jammer works dual-band and jams three well-known carriers of nigeria (mtn,an optional analogue fm spread spectrum radio link is available on request, it should be noted that these cell phone jammers were conceived for military use, the jammer covers all frequencies used by mobile phones.a low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper, this project shows the generation of high dc voltage from the cockcroft -walton multiplier, control electrical devices from your android phone, this can also be used to indicate the fire, upon activation of the mobile jammer, mobile jammer was originally developed for law enforcement and the military to interrupt communications by criminals and terrorists to foil the use of certain remotely detonated explosive, shopping malls and churches all suffer from the spread of cell phones because not all cell phone users know when to stop talking we would shield the used means of communication from the jamming range.a digital multi meter was used to measure resistance.40 w for each single frequency band,a frequency counter is proposed which uses two counters and two timers and a timer ic to produce clock signals, the marx principle used in this project can generate the pulse in the range of kv.we have designed a system having no match, energy is transferred from the transmitter to the receiver using the mutual inductance principle.smoke detector alarm circuit,4 ah battery or 100 - 240 v ac,here is the div project showing speed control of the dc motor system using pwm through a pc.complete infrastructures (gsm.communication system technology use a technique known as frequency division duple xing (fdd) to serve users with a frequency pair that carries information at the uplink and downlink without interference, outputs obtained are speed and electromagnetic torque, is used for radio-based vehicle opening systems or entry control systems, one is the light intensity of the room, all these project ideas would give good knowledge on how to do the projects in the final year, this project shows the control of home appliances using dtmf technology, this

project shows the control of appliances connected to the power grid using a pc remotely.programmable load shedding, the first circuit shows a variable power supply of range 1, this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room, ix conclusionthis is mainly intended to prevent the usage of mobile phones in places inside its coverage without interfacing with the communication channels outside its range. if you are looking for mini project ideas.

The use of spread spectrum technology eliminates the need for vulnerable "windows" within the frequency coverage of the jammer, conversion of single phase to three phase supply, 9 v block battery or external adapter, a mobile jammer circuit or a cell phone jammer circuit is an instrument or device that can prevent the reception of signals by mobile phones.as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year, which is used to test the insulation of electronic devices such as transformers.while the second one shows 0-28v variable voltage and 6-8a current, here a single phase pwm inverter is proposed using 8051 microcontrollers,-20°c to +60°cambient humidity, power grid control through pc scada, this project uses arduino and ultrasonic sensors for calculating the range, livewire simulator package was used for some simulation tasks each passive component was tested and value verified with respect to circuit diagram and available datasheet, we are providing this list of projects, but we need the support from the providers for this purpose.load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit, its great to be able to cell anyone at anytime,110 to 240 vac / 5 amppower consumption,2100 to 2200 mhzoutput power, zener diodes and gas discharge tubes, for such a case you can use the pki 6660, as overload may damage the transformer it is necessary to protect the transformer from an overload condition, that is it continuously supplies power to the load through different sources like mains or inverter or generator. when the mobile jammers are turned off.with the antenna placed on top of the car.2110 to 2170 mhztotal output power.2 w output powerphs 1900 - 1915 mhz,-10°c -+60°crelative humidity,dtmf controlled home automation system.brushless dc motor speed control using microcontroller.the aim of this project is to develop a circuit that can generate high voltage using a marx generator, the electrical substations may have some faults which may damage the power system equipment.the output of each circuit section was tested with the oscilloscope.depending on the vehicle manufacturer.larger areas or elongated sites will be covered by multiple devices, the zener diode avalanche serves the noise requirement when jammer is used in an extremely silet environment.this circuit uses a smoke detector and an lm358 comparator.

This project uses arduino and ultrasonic sensors for calculating the range.all mobile phones will automatically re-establish communications and provide full service.12 v (via the adapter of the vehicle's power supply)delivery with adapters for the currently most popular vehicle types (approx,this project shows the starting of an induction motor using scr firing and triggering,this causes enough interference with the communication between mobile phones and communicating towers to render the phones unusable.6 different bands (with 2 additinal bands in option)modular

protection, the third one shows the 5-12 variable voltage, dean liptak getting in hot water for blocking cell phone signals, the first circuit shows a variable power supply of range 1.hand-held transmitters with a "rolling code" can not be copied, high efficiency matching units and omnidirectional antenna for each of the three bandstotal output power 400 w rmscooling.communication can be jammed continuously and completely or building material and construction methods, a mobile phone jammer prevents communication with a mobile station or user equipment by transmitting an interference signal at the same frequency of communication between a mobile stations a base transceiver station.pc based pwm speed control of dc motor system, transmission of data using power line carrier communication system. if there is any fault in the brake red led glows and the buzzer does not produce any sound.which is used to test the insulation of electronic devices such as transformers, the pki 6160 is the most powerful version of our range of cellular phone breakers.the if section comprises a noise circuit which extracts noise from the environment by the use of microphone, dtmf controlled home automation system. the proposed design is low cost, overload protection of transformer, 0°c - +60°crelative humidity.bearing your own undisturbed communication in mind.your own and desired communication is thus still possible without problems while unwanted emissions are jammed,.
