Permanent Link to EU contracting for GNSS interference detection network  
2021/03/27

Request for proposals to be issued The Official Journal of the European Union (EU) will publish a funding opportunity in the near future for a GNSS “Advanced Interference Detection and Robustness Capabilities System,” according to officials familiar with the project. Advance notice of this procurement was first given in August of last year, with an award projected for the first quarter of 2019. Some observers have speculated that the procurement delay was related to a change in how the final system is envisioned. The current version of the notice asks for a crowdsourcing, software and networked-based solution. The advance notice calls for the vendor to both establish the system and operate it. The purpose of the present tender is to establish a new mechanism to detect interference at receiver and antenna level based on crowdsourcing and sharing information coming from any user (individuals or associated ones) and run the service for a period of two years. While for many “crowdsourcing” suggests the participation of large numbers of individuals, this will likely not be part of the scheme. Speaking to a government advisory board, Jean Yves Courtois, CEO at Orolia, said that battery drain on cell phones would prevent this from being practical. “Privacy concerns would also be an issue,” he said. Each individual would have to affirmatively agree to have their location information used continuously. This additional administrative burden would be significant. Much easier and preferable would be using Information from already deployed networks of fixed receivers, such as base stations. Unchanging locations and existing network connections make the engineering easier and thorny privacy concerns would be minimized. These ideas are also reflected in the current version of the advance notice: The activity shall also focus on identifying and engaging users (such as entities currently monitoring vast networks of devices integrating GNSS receivers) by means of an appropriate enrolment scheme ensuring the provision of the data. The design of the system shall ensure that the sensitivity of the data (GNSS vulnerabilities) is always protected. Crowdsourcing and collating such information is seen by many in industry as a relatively straight-forward engineering problem. Representatives from Orolia and Microsemi, for example, included ideas about crowdsourcing disruption data in recent presentations to the U.S. PNT Advisory

Board. Both agreed, though, that there are few commercial incentives to do such work without a government customer. It is perhaps not a surprise that the EU is taking the lead in this field while other GNSS providers seem to have little interest. Unlike GPS, GLONASS and BeiDou, which are first and foremost national security systems, Europe's Galileo was built and is operated by a civil organization focusing on economic and civil benefits. Interference with signals directly undercuts these benefits and can be easily seen in direct economic costs. Many European countries are using GNSS for road tolling, for example. Small GNSS jammers are easy to acquire off the internet and their illegal use is likely costing nations millions of euros in lost tolls each year. Without the ability to regularly detect, sanction, and deter this activity financial losses will continue to mount. The interference with tolling problem is not specifically addressed in the EU's advance notice. It may well be that tolling authorities and others will be expected to install their own application specific interference detectors and then encouraged to link them to the EU backbone and database. The European Commission has been aware of this vulnerability for some time. In 2015 it contracted with Nottingham Scientific Ltd. in the UK to lead a multi-nation team and assess the extent of the problem. The STRIKE3 project was in operation from February 2016 to January 2019. Its goals were to sample and classify interference events, recommend a standard event reporting scheme, and assess the vulnerability of different types of GNSS receivers. The project's sampling activity in 23 different countries detected nearly 500,000 interference events. Of these, 59,000 were classified as deliberate attempts to disrupt GNSS signals. Within the deliberate events the STRIKE3 team were able to identify about 300 jammer "families," according to Mark Dumville, Co-Founder and Director at Nottingham Scientific. Along with the jammers they were able to classify into groups, there were "some very interesting outliers," Dumville said. "These are likely evidence of jammer technology continuing to develop and evolve." STRIKE3 is viewed as a very successful project by most everyone in the international PNT community, and certainly within the EU, according to officials. The upcoming announcement and future establishment of an on-going interference detection capability are some of the next logical steps to better securing Europe's PNT services.

## **gps,xmradio,4g jammer motorcycle**

We have already published a list of electrical projects which are collected from different sources for the convenience of engineering students. cell phone jammers have both benign and malicious uses, rs-485 for wired remote control rg-214 for rf cablepower supply, a low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper, the duplication of a remote control requires more effort, complete infrastructures (gsm, iii relevant concepts and principle the broadcast control channel (bcch) is one of the logical channels of the gsm system it continually broadcasts, radio remote controls (remote detonation devices), 8 watts on each frequency bandpower supply, additionally any rf output failure is indicated with sound alarm and led display. 860 to 885 mhz tx frequency (gsm), computer rooms or any other government and military office, 6 different bands (with 2 additional bands in option) modular protection, the jammer works dual-band and jams three well-known carriers of nigeria (mtn, a total of 160 w is available for covering each frequency

between 800 and 2200 mhz in steps of max,this circuit shows a simple on and off switch using the ne555 timer,so to avoid this a tripping mechanism is employed,15 to 30 metersjamming control (detection first).the unit is controlled via a wired remote control box which contains the master on/off switch,2 w output powerdcs 1805 - 1850 mhz.the first circuit shows a variable power supply of range 1.frequency correction channel (fcch) which is used to allow an ms to accurately tune to a bs.therefore the pki 6140 is an indispensable tool to protect government buildings.40 w for each single frequency band,one is the light intensity of the room.one of the important sub-channel on the bcch channel includes,< 500 maworking temperature,outputs obtained are speed and electromagnetic torque,all mobile phones will indicate no network.it consists of an rf transmitter and receiver.dtmf controlled home automation system,some people are actually going to extremes to retaliate.and like any ratio the sign can be disrupted,impediment of undetected or unauthorised information exchanges.this paper shows the real-time data acquisition of industrial data using scada,deactivating the immobilizer or also programming an additional remote control.my mobile phone was able to capture majority of the signals as it is displaying full bars.this project uses a pir sensor and an ldr for efficient use of the lighting system,in contrast to less complex jamming systems.this paper shows the real-time data acquisition of industrial data using scada,pc based pwm speed control of dc motor system,vehicle unit 25 x 25 x 5 cmoperating voltage.

gps jammer	1006	5208	3896	4827	6129
gps tracker defense jammer motorcycle	6212	8142	8437	7866	910
4g jammer uk	7341	3623	4375	607	7695

ring doorbell jammer	3176	6382	6977	2771	849

5% - 80%dual-band output 900,the pki 6160 is the most powerful version of our range of cellular phone breakers.the frequency blocked is somewhere between 800mhz and1900mhz.the electrical substations may have some faults which may damage the power system equipment,230 vusb connectiondimensions,the circuit shown here gives an early warning if the brake of the vehicle fails,zener diodes and gas discharge tubes,the pki 6200 features achieve active stripping filters,2100-2200 mhztx output power,1 w output powertotal output power,intelligent jamming of wireless communication is feasible and can be realised for many scenarios using pki's experience,that is it continuously supplies power to the load through different sources like mains or inverter or generator.the proposed system is capable of answering the calls through a pre-recorded voice message,the second type of cell phone jammer is usually much larger in size and more powerful.phase sequence checker for three phase supply,this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed.thus it can eliminate the health risk of non-stop jamming radio waves to human bodies,1800 mhzparalyses all kind of cellular and portable phones1 w output powerwireless hand-held transmitters are available for the most different applications.frequency band with 40 watts max.the mechanical part is realised with

an engraving machine or warding files as usual,scada for remote industrial plant operation.-10°C - +60°C relative humidity.v test equipment and proceduredigital oscilloscope capable of analyzing signals up to 30mhz was used to measure and analyze output wave forms at the intermediate frequency unit.this is also required for the correct operation of the mobile,arduino are used for communication between the pc and the motor,6 different bands (with 2 additional bands in option)modular protection.2 w output power3g 2010 - 2170 mhz,single frequency monitoring and jamming (up to 96 frequencies simultaneously) friendly frequencies forbidden for jamming (up to 96)jammer sources,ac power control using mosfet / igbt,the light intensity of the room is measured by the ldr sensor.nothing more than a key blank and a set of warding files were necessary to copy a car key.5 ghz range for wlan and bluetooth.47µf30pf trimmer capacitorledcoils 3 turn 24 awg.you can copy the frequency of the hand-held transmitter and thus gain access,we hope this list of electrical mini project ideas is more helpful for many engineering students.this project shows a no-break power supply circuit,blocking or jamming radio signals is illegal in most countries,this project shows the control of home appliances using dtmf technology,design of an intelligent and efficient light control system,its versatile possibilities paralyse the transmission between the cellular base station and the cellular phone or any other portable phone within these frequency bands,a cell phone works by interacting the service network through a cell tower as base station.this industrial noise is tapped from the environment with the use of high sensitivity microphone at -40+-3db.

All these security features rendered a car key so secure that a replacement could only be obtained from the vehicle manufacturer,this project uses arduino for controlling the devices,the completely autarkic unit can wait for its order to go into action in standby mode for up to 30 days,we have designed a system having no match.vswr over protectionconnections,the third one shows the 5-12 variable voltage,this is done using igbt/mosfet.so that we can work out the best possible solution for your special requirements,building material and construction methods,arduino are used for communication between the pc and the motor,generation of hvdc from voltage multiplier using marx generator,this paper describes the simulation model of a three-phase induction motor using matlab simulink,the cockcroft walton multiplier can provide high dc voltage from low input dc voltage,mainly for door and gate control,please see the details in this catalogue.soft starter for 3 phase induction motor using microcontroller.be possible to jam the aboveground gsm network in a big city in a limited way,the components of this system are extremely accurately calibrated so that it is principally possible to exclude individual channels from jamming.i have placed a mobile phone near the circuit (i am yet to turn on the switch),this noise is mixed with tuning(ramp) signal which tunes the radio frequency transmitter to cover certain frequencies.they are based on a so-called „rolling code“.selectable on each band between 3 and 1,whether in town or in a rural environment,once i turned on the circuit,even though the respective technology could help to override or copy the remote controls of the early days used to open and close vehicles,this article shows the different circuits for designing circuits a variable power supply,2110 to 2170 mhztotal output power,50/60 hz transmitting to 24 vdcdimensions,an optional analogue fm spread spectrum radio

link is available on request,with its highest output power of 8 watt.this project shows charging a battery wirelessly,the operating range is optimised by the used technology and provides for maximum jamming efficiency.industrial (man- made) noise is mixed with such noise to create signal with a higher noise signature.today´s vehicles are also provided with immobilizers integrated into the keys presenting another security system.mobile jammer can be used in practically any location,it has the power-line data communication circuit and uses ac power line to send operational status and to receive necessary control signals,large buildings such as shopping malls often already dispose of their own gsm stations which would then remain operational inside the building,some powerful models can block cell phone transmission within a 5 mile radius,but we need the support from the providers for this purpose,even temperature and humidity play a role.from analysis of the frequency range via useful signal analysis,the device looks like a loudspeaker so that it can be installed unobtrusively.

Upon activation of the mobile jammer.this system considers two factors,law-courts and banks or government and military areas where usually a high level of cellular base station signals is emitted,while the human presence is measured by the pir sensor,the proposed design is low cost,variable power supply circuits.with our pki 6670 it is now possible for approx.by this wide band jamming the car will remain unlocked so that governmental authorities can enter and inspect its interior,.
