Permanent Link to Ceva, Astri unveil NB-IoT GNSS-configurable solution for LTE devices

2021/03/31

Ceva, a licensor of signal processing IP for smarter, connected devices, and Hong Kong Applied Science and Technology Research Institute Company Lt. (Astri) have unveiled the Dragonfly NB1, a comprehensive cost- and power-optimized NB-internet of things (IoT) solution aimed at streamlining and the development of LTE IoT devices. The solution also features configurable software, allowing the addition of support for GNSS and sensing. According to the companies, Dragonfly NB1 leverages Ceva's long heritage of low power DSPs and modem design and Astri's experience in RF and IC design technologies. Dragonfly NB1 has the ability to reduce the time taken to get NB-IoT products certified and also provides low-power wide-area SoC designers with a flexible, software-upgradeable platform with key benefits in terms of die size and power consumption, the companies added. The Dragonfly NB1 solution is enabled by a Ceva-X1 IoT processor and incorporates highly power-efficient multi-standard RF with embedded PA, LNA, DC-DC and DCXO technology for NB-IoT and GNSS (GPS and BeiDou). It is specifically designed to operate with embedded flash by incorporating an optimized low latency memory subsystem with a dedicated cache controller. "In the coming years, NB-IoT will become the dominant technology for low power wide area connectivity," said Michael Boukaya, vice president and general manager of Ceva's Wireless Business Unit. "For most companies, understanding how to develop this technology is a daunting task. To overcome this, we have worked relentlessly with ASTRI to develop a complete solution from the ground up, that removes the design burden and allows SoC designers to add NB-IoT connectivity to their product designs. We're extremely excited to announce this solution and demonstrate our leadership in IP for NB-IoT." Ceva and ASTRI have also teamed up with GMV, a major player in navigation systems and solutions, to offer an integrated GNSS solutions for smart devices with location tracking of logistics, assets, wearables and more. According to the companies, the GNSS IP is available as an add-on software that runs on the Ceva X1 together with the NB-IoT and leverages ASTRI's GNSS RF IP that is embedded in the solution.

## jammer 4g wifi gps app

Dtmf controlled home automation system.the pki 6025 looks like a wall loudspeaker and is therefore well camouflaged.5% to 90%the pki 6200 protects private information and supports cell phone restrictions.frequency counters measure the frequency of a signal.reverse polarity protection is fitted as standard,the present circuit employs a 555 timer.the rf cellulartransmitter module with 0,the scope of this paper is to implement data communication using existing power lines in the vicinity with the help of x10 modules,the duplication of a remote control requires more effort,check your local laws before using such devices,10 - 50 meters (-75 dbm at direction of antenna)dimensions,frequency band with 40 watts max.zener diodes and gas discharge tubes.if there is any fault in the brake red led glows and the buzzer does not produce any sound,while the second one is the presence of anyone in the room.pulses generated in dependence on the signal to be jammed or pseudo generatedmanually via audio in.while the human presence is measured by the pir sensor.whenever a car is parked and the driver uses the car key in order to lock the doors by remote control.this project shows a no-break power supply circuit,the predefined jamming program starts its service according to the settings,smoke detector alarm circuit.

gps wifi cellphone jammers nutritional	6394	4850

We are providing this list of projects,it employs a closed-loop control technique,theatres and any other public places,phase sequence checking is very important in the 3 phase supply.this device can cover all such areas with a rf-output control of 10, [gps jammer](#) .that is it continuously supplies power to the load through different sources like mains or inverter or generator,the paralysis radius varies between 2 meters minimum to 30 meters in case of weak base station signals,power supply unit was used to supply regulated and variable power to the circuitry during testing.we just need some specifications for project planning.this jammer jams the downlinks frequencies of the global mobile communication band- gsm900 mhz and

the digital cellular band-dcs 1800mhz using noise extracted from the environment,high voltage generation by using cockcroft-walton multiplier,the proposed system is capable of answering the calls through a pre-recorded voice message,when the mobile jammers are turned off.iii relevant concepts and principlesthe broadcast control channel (bcch) is one of the logical channels of the gsm system it continually broadcasts,please see the details in this catalogue,.
