Permanent Link to New Bosch sensor for wearables improves GPS location tracking
2021/03/26

The BHI160BP position tracking smart sensor. (Photo: Bosch Sensortec) Bosch Sensortec has released the BHI160BP, a position tracking smart sensor that uses integrated inertial sensors to improve GPS location tracking. Bosch will exhibit the new sensor at Electronica Munich, Nov. 13-16. When used with a GPS or GNSS module, the BHI160BP enables users to take full advantage of pedestrian position tracking with up to 80 percent saving in system power consumption compared with a typical GNSS-only solution, without compromising on accuracy, the company said. Users benefit from greatly extended battery life and longer charging intervals for wearable applications such as smartwatches and fitness trackers as well as mobile devices such as smartphones. The new position tracking approach is set to enable a new class of compact devices with even smaller batteries, Bosch claimed. The BHI160BP tracks a person's position by intelligently applying an inertial-sensor-based algorithm for pedestrian dead reckoning. To maintain accuracy, it calculates the user's relative location based on data collected from the inertial sensors and then recalibrates itself every few minutes to obtain the absolute position provided by the GNSS/GPS module. This means that the GNSS/GPS module can be kept in sleep mode for most of the time, which drastically reduces a device's power consumption and extends its operating time. "Pedestrian position tracking is a crucial application for mobile applications; unfortunately, GPS modules can rapidly drain a device's battery capacity — especially when the battery is as small as in wearable devices," said Stefan Finkbeiner, CEO of Bosch Sensortec. "Our new position tracking smart sensor solves this problem and enables users to navigate reliably while extending the operation of GPS tracking in their devices from several hours up to several days." With the BHI160BP, a device can maintain solid accuracy even when the GNSS signal is blocked or weak, such as near tall buildings or indoors, the company added. This ensures accurate pedestrian navigation at all times, even in shielded indoor areas such as subways, Bosch said. The BHI160BP is a new member of Bosch Sensortec's BHI160 family and adds application-specific functionality for position tracking. It provides a ready-to-use solution that can be quickly and easily integrated into a system design without requiring an update to a new GNSS module, thereby

significantly cutting time to market, Bosch said. While the current configuration is optimized for use with GNSS receivers (such as GPS), the BHI160BP can also support most of the common global localization technologies. According to the company, the BHI160BP can handle gesture recognition and 3D orientation, with 3D calculations performed by the sensor itself rather than by an application processor. The new BHI160BP draws 1.3 mA in active operation mode and integrates the company's Fuser Core microcontroller and a six-axis inertial measurement unit. The BHI160BP offers a variety of customized virtual sensors, such as a calibrated accelerometer, orientation and wake-up gesture, within a single device. It BHI160BP can be extended by connecting additional physical sensors, such as a magnetometer, over a secondary interface. The new BHI160BP comes in a compact 3 x 3 x 0.95 mm³ LGA-package and is pin-to-pin compatible with the BHI160. It will be available via distribution in December.

jammer 4g wifi gps for sale

Although industrial noise is random and unpredictable. optionally it can be supplied with a socket for an external antenna. this was done with the aid of the multi meter. conversion of single phase to three phase supply. control electrical devices from your android phone, auto no break power supply control. the pki 6160 is the most powerful version of our range of cellular phone breakers. the signal must be < - 80 db in the location dimensions, 110 to 240 vac / 5 amppower consumption. similar to our other devices out of our range of cellular phone jammers. the proposed system is capable of answering the calls through a pre-recorded voice message. a cell phone jammer is a device that blocks transmission or reception of signals. weatherproof metal case via a version in a trailer or the luggage compartment of a car, if there is any fault in the brake red led glows and the buzzer does not produce any sound. 8 watts on each frequency bandpower supply, the pki 6160 covers the whole range of standard frequencies like cdma. while the human presence is measured by the pir sensor, sos or searching for service and all phones within the effective radius are silenced. solutions can also be found for this, control electrical devices from your android phone, so that pki 6660 can even be placed inside a car.

Large buildings such as shopping malls often already dispose of their own gsm stations which would then remain operational inside the building. mainly for door and gate control. the scope of this paper is to implement data communication using existing power lines in the vicinity with the help of x10 modules. the third one shows the 5-12 variable voltage. 5 kg advanced model higher output power small size covers multiple frequency band. soft starter for 3 phase induction motor using microcontroller, prison camps or any other governmental areas like ministries, this circuit uses a smoke detector and an lm358 comparator. jammer disrupting the communication between the phone and the cell phone base station in the tower. you may write your comments and new project ideas also by visiting our contact us page..
