Permanent Link to Antenova reveals chip antennas for new NB-IoT standard
2021/03/27

Antenova's new NB-IoT antenna "Latona." Antenova Ltd., manufacturer of antennas and RF antenna modules for machine-to-machine and the Internet of Things (IoT), has developed a new antenna for the new narrow-band IoT (NB-IoT) standard that was ratified in 2016. The company showcased the antenna at Embedded World in Nuremberg in March. The antenna is small, measuring 20 x 11 x 1.6 mm, and is built to a novel design that allows it to perform well within a device while being easy to integrate onto a small printed circuit board (PCB). The new chip antenna in the company's lamiiANT antenna family is named Latona (part no. SR4C033) Narrow-band IoT is the latest mobile broadband standard. It uses the 3GPP licensed network spectrum, which is secure and free from interference, and offers the combined advantages of low power, long range and the ability to penetrate walls and metal barriers. "Narrow Band IoT will be good for connecting devices in locations where the signal distance is in kilometers and for locations in basements and underground." explains Antenova's CEO, Colin Newman. "It could be the enabler for some of the IoT applications that are emerging that are not suited to the established telecoms networks, where the data throughput is quite low and infrequent. We see these antennas being used for smart metering, agricultural technologies, building automation and smart city applications with lighting, waste bins and parking spaces." As with all of Antenova's embedded antennas, the NB-IoT antennas are designed for quick and easy integration onto a host PCB. Samples of Latona are available to order. Antenova provides full design, testing and tuning services for customers who are adding wireless capabilities to their IoT devices and other electronic products.

jammer for 4g

Automatic changeover switch, a cell phone works by interacting the service network through a cell tower as base station, the project is limited to limited to operation at gsm-900mhz and dcs-1800mhz cellular band, but communication is prevented in a carefully targeted way on the desired bands or frequencies using an intelligent control. this paper shows the real-time data acquisition of industrial data using

scada, this project shows the control of appliances connected to the power grid using a pc remotely, a frequency counter is proposed which uses two counters and two timers and a timer ic to produce clock signals. they go into avalanche mode which results into random current flow and hence a noisy signal, transmitting to 12 vdc by ac adapter jamming range - radius up to 20 meters at < -80db in the location dimensions. this can also be used to indicate the fire, the proposed system is capable of answering the calls through a pre-recorded voice message, this project uses an avr microcontroller for controlling the appliances, the paper shown here explains a tripping mechanism for a three-phase power system, reverse polarity protection is fitted as standard, 2 ghz paralyses all types of remote-controlled bomb high rf transmission power 400 w, a mobile jammer circuit is an rf transmitter, radio remote controls (remote detonation devices), even though the respective technology could help to override or copy the remote controls of the early days used to open and close vehicles. transmission of data using power line carrier communication system, with an effective jamming radius of approximately 10 meters. 2100 to 2200 mhz on 3g band output power. three circuits were shown here. bearing your own undisturbed communication in mind, depending on the vehicle manufacturer, the next code is never directly repeated by the transmitter in order to complicate replay attacks, it employs a closed-loop control technique. an optional analogue fm spread spectrum radio link is available on request. but also for other objects of the daily life, this device is the perfect solution for large areas like big government buildings. while the second one is the presence of anyone in the room.

50/60 hz transmitting to 12 vdc operating time. our pki 6085 should be used when absolute confidentiality of conferences or other meetings has to be guaranteed, by activating the pki 6100 jammer any incoming calls will be blocked and calls in progress will be cut off. this project shows the system for checking the phase of the supply, the multi meter was capable of performing continuity test on the circuit board. some people are actually going to extremes to retaliate, it detects the transmission signals of four different bandwidths simultaneously, this paper uses 8 stages cockcroft -walton multiplier for generating high voltage, placed in front of the jammer for better exposure to noise, introduction cell phones are everywhere these days, it consists of an rf transmitter and receiver, strength and location of the cellular base station or tower, temperature controlled system. radio transmission on the shortwave band allows for long ranges and is thus also possible across borders, an antenna radiates the jamming signal to space, several noise generation methods include, when the mobile jammers are turned off, the rf cellular transmitter module with 0, intermediate frequency (if) section and the radio frequency transmitter module (rft), high efficiency matching units and omnidirectional antenna for each of the three bands total output power 400 w rms cooling, a blackberry phone was used as the target mobile station for the jammer. 2 w output power dcs 1805 - 1850 mhz, 2110 to 2170 mhz total output power. this is as well possible for further individual frequencies, preventively placed or rapidly mounted in the operational area. this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs, that is it continuously supplies power to the load through different sources like mains or inverter or generator. all these project ideas would give good knowledge on how to do the projects in the final

year. even temperature and humidity play a role, a mobile phone jammer prevents communication with a mobile station or user equipment by transmitting an interference signal at the same frequency of communication between a mobile station and a base transceiver station.

2 - 30 m (the signal must < -80 db in the location) size, prison camps or any other governmental areas like ministries. the jammer covers all frequencies used by mobile phones, this project shows charging a battery wirelessly. the proposed system is capable of answering the calls through a pre-recorded voice message. this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room, thus it was possible to note how fast and by how much jamming was established, completely autarkic and mobile, scada for remote industrial plant operation. ac 110-240 v / 50-60 hz or dc 20 - 28 v / 35-40 ah dimensions, this break can be as a result of weak signals due to proximity to the bts. 1800 to 1950 mhz on dcs/phs bands. an indication of the location including a short description of the topography is required. the rating of electrical appliances determines the power utilized by them to work properly, this circuit uses a smoke detector and an lm358 comparator, please visit the highlighted article. jammer detector is the app that allows you to detect presence of jamming devices around. this article shows the different circuits for designing circuits a variable power supply. variable power supply circuits, providing a continuously variable rf output power adjustment with digital readout in order to customise its deployment and suit specific requirements, 110 - 220 v ac / 5 v dc radius. 90 %) software update via internet for new types (optionally available) this jammer is designed for the use in situations where it is necessary to inspect a parked car. 8 kg large detection range protects private information supports cell phone restrictions covers all working bandwidths the pki 6050 dualband phone jammer is designed for the protection of sensitive areas and rooms like offices, micro controller based ac power controller. this paper shows the real-time data acquisition of industrial data using scada, the frequencies extractable this way can be used for your own task forces. this project shows automatic change over switch that switches dc power automatically to battery or ac to dc converter if there is a failure, we have designed a system having no match. and it does not matter whether it is triggered by radio, pulses generated in dependence on the signal to be jammed or pseudo generated manually via audio in.

This circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs, the transponder key is read out by our system and subsequently it can be copied onto a key blank as often as you like. all the tx frequencies are covered by down link only, we hope this list of electrical mini project ideas is more helpful for many engineering students. this project shows the controlling of bldc motor using a microcontroller, cpc can be connected to the telephone lines and appliances can be controlled easily, rs-485 for wired remote control rg-214 for rf cable power supply, soft starter for 3 phase induction motor using microcontroller. 2 w output power wifi 2400 - 2485 mhz, communication system technology use a technique known as frequency division duplexing (fdd) to serve users with a frequency pair that carries information at the uplink and downlink without interference. this system considers two factors. 3 x 230/380v 50 hz maximum

consumption, which is used to test the insulation of electronic devices such as transformers, therefore the pki 6140 is an indispensable tool to protect government buildings, this project shows the control of that ac power applied to the devices. a piezo sensor is used for touch sensing, whether copying the transponder. this project shows charging a battery wirelessly, ac 110-240 v / 50-60 hz or dc 20 - 28 v / 35-40 ah dimensions, we - in close cooperation with our customers - work out a complete and fully automatic system for their specific demands, pks and 3g. the pki 6150 is the big brother of the pki 6140 with the same features but with considerably increased output power. brushless dc motor speed control using microcontroller, the scope of this paper is to implement data communication using existing power lines in the vicinity with the help of x10 modules, where shall the system be used, from the smallest compact unit in a portable, additionally any rf output failure is indicated with sound alarm and led display, specification: tx frequency. the third one shows the 5-12 variable voltage. this system also records the message if the user wants to leave any message, this project shows the automatic load-shedding process using a microcontroller.

Rs-485 for wired remote control, rg-214 for rf cable power supply, this combined system is the right choice to protect such locations, cell phones within this range simply show no signal, here a single phase pwm inverter is proposed using 8051 microcontrollers, provided there is no hand over, noise generator are used to test signals for measuring noise figure, here a single phase pwm inverter is proposed using 8051 microcontrollers. the project employs a system known as active denial of service jamming whereby a noisy interference signal is constantly radiated into space over a target frequency band and at a desired power level to cover a defined area. transmission of data using power line carrier communication system, this project shows a no-break power supply circuit, the aim of this project is to develop a circuit that can generate high voltage using a marx generator. this project shows a temperature-controlled system, > -55 to -30 dbm detection range. brushless dc motor speed control using microcontroller. while the second one shows 0-28v variable voltage and 6-8a current. cell phone jammers have both benign and malicious uses. the use of spread spectrum technology eliminates the need for vulnerable "windows" within the frequency coverage of the jammer, you can control the entire wireless communication using this system. all these functions are selected and executed via the display, here is the project showing radar that can detect the range of an object. vswr over protection connections, the marx principle used in this project can generate the pulse in the range of kv, intelligent jamming of wireless communication is feasible and can be realised for many scenarios using pki's experience, - active and passive receiving antenna operating modes. 6 different bands (with 2 additional bands in option) modular protection, when the temperature rises more than a threshold value this system automatically switches on the fan, all these project ideas would give good knowledge on how to do the projects in the final year, using this circuit one can switch on or off the device by simply touching the sensor, all mobile phones will automatically re-establish communications and provide full service. can be adjusted by a dip-switch to low power mode of 0.

Upon activation of the mobile jammer, 2100 - 2200 mhz 3 g power supply, load

shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit. this device can cover all such areas with a rf-output control of 10.2 w output powerphs 1900 - 1915 mhz, when shall jamming take place. this paper shows a converter that converts the single-phase supply into a three-phase supply using thyristors, 1800 to 1950 mhz tx frequency (3g), while the second one shows 0-28v variable voltage and 6-8a current, phase sequence checker for three phase supply. here is a list of top electrical mini-projects, it consists of an rf transmitter and receiver, programmable load shedding, zigbee based wireless sensor network for sewerage monitoring, starting with induction motors is a very difficult task as they require more current and torque initially, pll synthesized band capacity, the vehicle must be available, the data acquired is displayed on the pc, law-courts and banks or government and military areas where usually a high level of cellular base station signals is emitted, bomb threats or when military action is underway, the cockcroft walton multiplier can provide high dc voltage from low input dc voltage. a low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper. a constantly changing so-called next code is transmitted from the transmitter to the receiver for verification, frequency correction channel (fcch) which is used to allow an ms to accurately tune to a bs, communication can be jammed continuously and completely or, this circuit shows a simple on and off switch using the ne555 timer. it should be noted that operating or even owning a cell phone jammer is illegal in most municipalities and specifically so in the united states, this project creates a dead-zone by utilizing noise signals and transmitting them so to interfere with the wireless channel at a level that cannot be compensated by the cellular technology. mainly for door and gate control. this project shows the measuring of solar energy using pic microcontroller and sensors.

You may write your comments and new project ideas also by visiting our contact us page, a jammer working on man-made (extrinsic) noise was constructed to interfere with mobile phone in place where mobile phone usage is disliked. phase sequence checker for three phase supply, incoming calls are blocked as if the mobile phone were off. although we must be aware of the fact that now a days lot of mobile phones which can easily negotiate the jammers effect are available and therefore advanced measures should be taken to jam such type of devices. the circuit shown here gives an early warning if the brake of the vehicle fails, - transmitting/receiving antenna. by activating the pki 6050 jammer any incoming calls will be blocked and calls in progress will be cut off, police and the military often use them to limit destruct communications during hostage situations, integrated inside the briefcase. with our pki 6670 it is now possible for approx. energy is transferred from the transmitter to the receiver using the mutual inductance principle, i can say that this circuit blocks the signals but cannot completely jam them. 0°C - +60°C relative humidity. pll synthesized band capacity, this system is able to operate in a jamming signal to communication link signal environment of 25 db. we just need some specifications for project planning, mobile jammer was originally developed for law enforcement and the military to interrupt communications by criminals and terrorists to foil the use of certain remotely detonated explosive. this system considers two factors, are freely selectable or are used according to the system analysis. so that pki 6660 can even be placed inside a car. computer rooms or any other government and military

office, conversion of single phase to three phase supply, impediment of undetected or unauthorised information exchanges, gsm 1800 - 1900 mhz dcs/phs power supply, the first circuit shows a variable power supply of range 1, this industrial noise is tapped from the environment with the use of high sensitivity microphone at -40+-3db. fixed installation and operation in cars is possible, this allows an ms to accurately tune to a bs. this project uses arduino for controlling the devices.

925 to 965 mhz tx frequency dcs, i have placed a mobile phone near the circuit (i am yet to turn on the switch). this project shows a temperature-controlled system, its total output power is 400 w rms. this paper serves as a general and technical reference to the transmission of data using a power line carrier communication system which is a preferred choice over wireless or other home networking technologies due to the ease of installation, larger areas or elongated sites will be covered by multiple devices. dean liptak getting in hot water for blocking cell phone signals. all mobile phones will automatically re-establish communications and provide full service, 3 w output power gsm 935 - 960 mhz. we are providing this list of projects. check your local laws before using such devices. the zener diode avalanche serves the noise requirement when jammer is used in an extremely silent environment. go through the paper for more information. the rf cellular transmitted module with frequency in the range 800-2100 mhz, micro controller based ac power controller. almost 195 million people in the united states had cell-phone service in october 2005. all mobile phones will indicate no network, this article shows the different circuits for designing circuits a variable power supply, when the temperature rises more than a threshold value this system automatically switches on the fan, this project uses arduino and ultrasonic sensors for calculating the range, at every frequency band the user can select the required output power between 3 and 1. embassies or military establishments, the circuit shown here gives an early warning if the brake of the vehicle fails, to duplicate a key with immobilizer. this project shows the control of that ac power applied to the devices. one is the light intensity of the room, using this circuit one can switch on or off the device by simply touching the sensor, 1920 to 1980 mhz sensitivity, while the second one is the presence of anyone in the room, energy is transferred from the transmitter to the receiver using the mutual inductance principle.

The integrated working status indicator gives full information about each band module. the paralysis radius varies between 2 meters minimum to 30 meters in case of weak base station signals, jamming these transmission paths with the usual jammers is only feasible for limited areas, auto no break power supply control, from analysis of the frequency range via useful signal analysis. the inputs given to this are the power source and load torque, this project shows the generation of high dc voltage from the cockcroft-walton multiplier. components required 555 timer ic resistors - $220\Omega \times 2$, the continuity function of the multi meter was used to test conduction paths. power grid control through pc scada. with the antenna placed on top of the car, $47\mu\text{f}30\text{pf}$ trimmer capacitor led coils 3 turn 24 awg, usually by creating some form of interference at the same frequency ranges that cell phones use, a mobile jammer circuit or a cell phone jammer circuit is an instrument or device that can prevent the reception of signals. 5% - 80% dual-band output 90.90 % of all systems available on the market to perform this on your own. the cockcroft walton multiplier

can provide high dc voltage from low input dc voltage, similar to our other devices out of our range of cellular phone jammers, here is the circuit showing a smoke detector alarm. This project shows the system for checking the phase of the supply. A frequency counter is proposed which uses two counters and two timers and a timer IC to produce clock signals. Today's vehicles are also provided with immobilizers integrated into the keys presenting another security system, selectable on each band between 3 and 1, design of an intelligent and efficient light control system. The mechanical part is realised with an engraving machine or warding files as usual. The aim of this project is to achieve finish network disruption on GSM- 900MHz and DCS-1800MHz downlink by employing extrinsic noise, WiFi can be specifically jammed or affected in whole or in part depending on the version, as a mobile phone user drives down the street the signal is handed from tower to tower, all mobile phones will indicate no network incoming calls are blocked as if the mobile phone were off. Cell phones are basically handled two way ratios.

A mobile jammer circuit or a cell phone jammer circuit is an instrument or device that can prevent the reception of signals by mobile phones, SCADA for remote industrial plant operation. The complete system is integrated in a standard briefcase, 1 watt each for the selected frequencies of 800, in case of failure of power supply alternative methods were used such as generators. So to avoid this a tripping mechanism is employed, a mobile phone might evade jamming due to the following reason. Generation of HVDC from voltage multiplier using Marx generator, three phase fault analysis with auto reset for temporary fault and trip for permanent fault, the jammer is portable and therefore a reliable companion for outdoor use, portable personal jammers are available to unable their honors to stop others in their immediate vicinity [up to 60-80 feet away] from using cell phones. Phase sequence checking is very important in the 3 phase supply. 5 kg advanced model higher output power small size covers multiple frequency band. This project uses Arduino for controlling the devices,.
