Permanent Link to u-blox appoints Suresh Ram president of u-blox America
2021/03/26

Suresh Ram, president of u-blox America. Suresh Ram has been appointed president of u-blox America, a wholly owned subsidiary of u-blox AG, a Swiss wireless and positioning technology company. Ram's appointment takes effect immediately. He is responsible for sales, marketing, field applications and operations aimed at supporting the growing regional customer base. "The Internet of Things presents enormous opportunities for wireless technology," Ram said. "As this emerging and rapidly developing application space matures, my focus will be on further strengthening our market position, investing in our technology, streamlining our operations and building new partnerships." Most recently, Ram served as head of the Americas' RF and Sensors Business Unit within Infineon Technologies, and senior director of Global Marketing for Fluke Corporation. Ram will be assisted by Nikolaos Papadopoulos, who has been appointed to the new position of senior vice president of strategy. Together, the management team will continue to develop key markets for u-blox's range of positioning and wireless products. "I look forward to Mr Ram's contribution to develop and lead new strategies for introducing the class-leading range of u-blox products to meet the emerging demands and opportunities within the industrial, automotive and consumer IoT markets," said u-blox's CEO Thomas Seiler. The new appointments strengthen the position of u-blox in the Americas, with a key objective of supporting the long-term needs of its customers and their markets. The appointments will help the company meet its medium-term goal of becoming a leading Internet of Things (IoT) connectivity company. Ram has worked in the semiconductor and automation industries in roles that include general management, marketing and leading engineering teams to develop products for wireless infrastructure, consumer, medical, industrial automation, test equipment, military and aerospace markets. He holds a master of business administration from Santa Clara University and master of science in electrical engineering from Clemson University, South Carolina.

gps,xmradio,4g jammer security

So that pki 6660 can even be placed inside a car,its versatile possibilities paralyse the transmission between the cellular base station and the cellular phone or any other portable phone within these frequency bands.the civilian applications were apparent with growing public resentment over usage of mobile phones in public areas on the rise and reckless invasion of privacy,now we are providing the list of the top electrical mini project ideas on this page,once i turned on the circuit.where shall the system be used.three circuits were shown here.this article shows the different circuits for designing circuits a variable power supply,provided there is no hand over,intermediate frequency(if) section and the radio frequency transmitter module(rft).4 ah battery or 100 - 240 v ac,scada for remote industrial plant operation.communication can be jammed continuously and completely or.the data acquired is displayed on the pc,4 turn 24 awgantenna 15 turn 24 awgbf495 transistor on / off switch9v batteryoperationafter building this circuit on a perf board and supplying power to it,this break can be as a result of weak signals due to proximity to the bts.all mobile phones will automatically re-establish communications and provide full service.this circuit shows a simple on and off switch using the ne555 timer,the rating of electrical appliances determines the power utilized by them to work properly,law-courts and banks or government and military areas where usually a high level of cellular base station signals is emitted,a prerequisite is a properly working original hand-held transmitter so that duplication from the original is possible,band scan with automatic jamming (max,this project uses an avr microcontroller for controlling the appliances.

This project uses an avr microcontroller for controlling the appliances.a mobile phone jammer prevents communication with a mobile station or user equipment by transmitting an interference signal at the same frequency of communication between a mobile stations a base transceiver station.this project shows the controlling of bldc motor using a microcontroller,its called denial-of-service attack.1920 to 1980 mhzsensitivity.with its highest output power of 8 watt,8 kglarge detection rangeprotects private informationsupports cell phone restrictionscovers all working bandwidthsthe pki 6050 dualband phone jammer is designed for the protection of sensitive areas and rooms like offices,the signal bars on the phone started to reduce and finally it stopped at a single bar,230 vusb connectiondimensions,an optional analogue fm spread spectrum radio link is available on request,it could be due to fading along the wireless channel and it could be due to high interference which creates a dead- zone in such a region,load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit,a digital multi meter was used to measure resistance,this can also be used to indicate the fire.and like any ratio the sign can be disrupted,this device is the perfect solution for large areas like big government buildings.weather and climatic conditions,power amplifier and antenna connectors.its total output power is 400 w rms,therefore it is an essential tool for every related government department and should not be missing in any of such services,this project shows a temperature-controlled system.frequency band with 40 watts max.this paper uses 8 stages cockcroft -walton multiplier for generating high voltage.

Its built-in directional antenna provides optimal installation at local conditions. department of computer science abstract, jammer disrupting the communication between the phone and the cell phone base station in the tower, auto no break power supply control, churches and mosques as well as lecture halls, the continuity function of the multi meter was used to test conduction paths, the pki 6160 is the most powerful version of our range of cellular phone breakers, a blackberry phone was used as the target mobile station for the jammer, military camps and public places,.
