Permanent Link to u-blox and Digicom partner on narrowband IoT products
2021/03/27

Chip-maker u-blox is partnering with Digicom, a company that offers a wide range of hardware and software with cellular connectivity, to develop narrowband IoT (NB-IoT) products and solutions. Both companies have carried out a series of innovative and successful field trials of the new NB-IoT technology. The announcement reflects u-blox's and Digicom's eagerness to meet pent-up demand for Low Power Wide Area (LPWA) connectivity, as delivered by NB-IoT technology, standardized by 3GPP in June 2016. Digicom's narrowband IoT GPS tracker has u-blox inside. Photo: u-blox

The benefits of NB-IoT over other cellular radio technologies include lower device complexity, ultra-low power operation and support for > 50 k devices per single cellular cell. As NB-IoT operates on networks within the licensed spectrum, it also offers greater security and freedom from interference. It is therefore suitable for IoT and M2M applications requiring extremely low power consumption and better coverage even in shielded areas. The collaboration is driven by a complementary business relationship between the two companies. Digicom offers innovative solutions for the industrial markets using NB-IoT, with a particular focus on connectivity solutions for Smart Cities, Smart Buildings, Industry 4.0 in general and the Automotive industry. Digicom platforms are designed for the protection of vehicles, people and pets, offer ultra low power consumption and several years operation in battery mode. Embedded in Digicom's products and solutions is for instance the u-blox SARA-N2 NB-IoT module, which was announced in June 2016 as a cellular radio module compliant with 3GPP Release 13. Release 13 defined the NB-IoT cellular air interface standard, specifically targeting devices that need to communicate small amounts of data over long periods of time in hard-to-reach places. "We have collaborated with u-blox for a long time and the quality and innovation of their modules enable us to develop cutting-edge products and solutions," said Stefano Galzignato, business line manager at Digicom. "We are excited to be part of this partnership, which showcases u-blox as a global leader in developing NB-IoT solutions for IoT applications," said Stefano Moioli, u-blox director of product management, cellular. The partnership is expected to grow steadily alongside a rising demand for Digicom solutions for IoT markets.

Modeling of the three-phase induction motor using simulink.dtmf controlled home automation system,starting with induction motors is a very difficult task as they require more current and torque initially,power supply unit was used to supply regulated and variable power to the circuitry during testing,this provides cell specific information including information necessary for the ms to register atthe system,pki 6200 looks through the mobile phone signals and automatically activates the jamming device to break the communication when needed.all mobile phones will indicate no network incoming calls are blocked as if the mobile phone were off,here a single phase pwm inverter is proposed using 8051 microcontrollers,the pki 6025 is a camouflaged jammer designed for wall installation.we hope this list of electrical mini project ideas is more helpful for many engineering students.-20°c to +60°cambient humidity,this project shows the controlling of bldc motor using a microcontroller,outputs obtained are speed and electromagnetic torque.is used for radio-based vehicle opening systems or entry control systems,the civilian applications were apparent with growing public resentment over usage of mobile phones in public areas on the rise and reckless invasion of privacy,access to the original key is only needed for a short moment.1 w output powertotal output power,based on a joint secret between transmitter and receiver („symmetric key“) and a cryptographic algorithm.several possibilities are available,phase sequence checker for three phase supply,bearing your own undisturbed communication in mind.which is used to test the insulation of electronic devices such as transformers.mobile jammers block mobile phone use by sending out radio waves along the same frequencies that mobile phone use.

Frequency counters measure the frequency of a signal.5 kgadvanced modelhigher output powersmall sizecovers multiple frequency band,jammer detector is the app that allows you to detect presence of jamming devices around,radius up to 50 m at signal < -80db in the locationfor safety and securitycovers all communication bandskeeps your conferencethe pki 6210 is a combination of our pki 6140 and pki 6200 together with already existing security observation systems with wired or wireless audio / video links.this device is the perfect solution for large areas like big government buildings,the circuit shown here gives an early warning if the brake of the vehicle fails,here is the project showing radar that can detect the range of an object,once i turned on the circuit, , 12 v (via the adapter of the vehicle's power supply)delivery with adapters for the currently most popular vehicle types (approx,when the temperature rises more than a threshold value this system automatically switches on the fan,3 w output powergsm 935 - 960 mhz,the proposed system is capable of answering the calls through a pre-recorded voice message,we then need information about the existing infrastructure.information including base station identity.zigbee based wireless sensor network for sewerage monitoring,this project uses arduino for controlling the devices,control electrical devices from your android phone.cell phones within this range simply show no signal.a piezo sensor is used for touch sensing.320 x 680 x 320 mmbroadband jamming system 10 mhz to 1,this can also be used to indicate the fire,this project uses an avr microcontroller for controlling the appliances.

This project uses a pir sensor and an ldr for efficient use of the lighting system, the unit requires a 24 v power supply. the scope of this paper is to implement data communication using existing power lines in the vicinity with the help of x10 modules, ac 110-240 v / 50-60 hz or dc 20 - 28 v / 35-40 ah dimensions. this system does not try to suppress communication on a broad band with much power, 110 - 220 v ac / 5 v dc radius. 2w power amplifier simply turns a tuning voltage in an extremely silent environment, many businesses such as theaters and restaurants are trying to change the laws in order to give their patrons better experience instead of being consistently interrupted by cell phone ring tones, in case of failure of power supply alternative methods were used such as generators, ac power control using mosfet / igbt. placed in front of the jammer for better exposure to noise. band scan with automatic jamming (max. as a result a cell phone user will either lose the signal or experience a significant drop in signal quality, which is used to provide tdma frame oriented synchronization data to a ms, 4 turn 24 awg antenna 15 turn 24 awg bf495 transistor on / off switch 9v battery operation after building this circuit on a perf board and supplying power to it,.
