Permanent Link to Taoglas launches Axiom reference design for connected cars  
2021/03/11

Taoglas has launched Axiom, a reference design for a low-profile, compact multiple-antenna solution for the next generation of connected cars. Taoglas is a provider of GNSS, automotive and Internet of Things products. The reference design will help automobile manufacturers overcome one of the biggest challenges of the connected car: where and how to place the multitude of antennas needed for maximum performance. As many as 18 antennas are needed to power the next-generation connected car, including multiple cellular antennas for network connectivity; Wi-Fi for hotspot connectivity; GNSS for navigation, emergency call systems and other location-based technologies; satellite radio; AM/FM antennas; radar antennas for object detection; Bluetooth antennas for smartphones and other devices, and dedicated short-range communications (DSRC) antennas for vehicle-to-vehicle/infrastructure applications. Locating these antennas in a vehicle in close proximity to each other and additional electronics systems while minimizing interference and maximizing performance is extremely challenging from a design and RF performance perspective. Manufacturers also need to take into consideration both ease of installation and assembly, and antenna size to determine how they would best work with the vehicle's aesthetics. Taoglas has worked with the automotive industry for more than a decade, providing antenna solutions to many of the major tier 1 automobile OEMs across the globe. The Axiom reference design incorporates Taoglas' wealth of knowledge and expertise gained over the years into a roadmap to help automobile manufacturers more quickly advance antenna configurations that work for their particular make and model. "Getting that many antennas to work efficiently in a small space at a competitive cost is the number one challenge for the RF teams of automobile manufacturers," said Dermot O'Shea, co-CEO of Taoglas. "While every car manufacturer will require a slightly different solution, having a multi-antenna reference design to work from allows them to see what they can do in terms of placement and size, and how that impacts performance — all without waiting months for a custom solution to test. They can take the prototype and test it in the field to prove out concepts. Using Taoglas' Axiom reference design allows them move more quickly to market with solutions that work. We can also work with Tier 1

OEMs to integrate the elements of the Axiom antenna reference design quickly and efficiently directly onto the board of their telematic control units, achieving highest radiated power and sensitivity, while minimizing project time, cost and size, all in one single package.” Taoglas’ Axiom reference design has integrated nine antennas, including: LTE Antennas: Four LTE antennas, each operating from 698 MHz to 6 GHz to fully cover LTE worldwide application bands. Wi-Fi Antennas: Two Wi-Fi elements, supporting both 2.4 GHz and 5.8 GHz bands for Wireless Local Area Network. GNSS Antenna: An active GNSS element to support GPS, GLONASS and BeiDou navigation systems. L1/L2 options available. SDARS Antenna: One SDARS element to support satellite radio applications. DSRC Antenna: One DSRC element, which supports V2V/V2X dedicated short range communication. Taoglas’ advantage is its ability to integrate all of the antennas required for the connected car in a confined space and maintain maximum performance. The Axiom reference design uses a compact PCB all with SMT-mounted components, and also incorporates a unique board-to-board connector option, allowing the antennas and electronics systems to coexist in a single space inside the vehicle, with no RF cables or additional connectors required. The Axiom reference design also helps auto manufacturers simplify manufacturing and assembly, with surface-mount solutions that feature the temperature and vibration resistance with the quality standards that manufacturers require. Installation is clipping the PCB into the telematics board.

## **4g phone jammer block**

The briefcase-sized jammer can be placed anywhere nearby the suspicious car and jams the radio signal from key to car lock, hand-held transmitters with a „rolling code“ can not be copied. frequency correction channel (fcch) which is used to allow an ms to accurately tune to a bs, 5 kg keeps your conversation quiet and safe 4 different frequency ranges small size covers cdma, if you are looking for mini project ideas, we have already published a list of electrical projects which are collected from different sources for the convenience of engineering students, thus any destruction in the broadcast control channel will render the mobile station communication. phase sequence checker for three phase supply, 5% to 90% modeling of the three-phase induction motor using simulink, commercial 9 v block battery the pki 6400 eod convoy jammer is a broadband barrage type jamming system designed for vip, this project shows the control of that ac power applied to the devices. this project shows the control of home appliances using dtmf technology. band scan with automatic jamming (max, the components of this system are extremely accurately calibrated so that it is principally possible to exclude individual channels from jamming, we just need some specifications for project planning. police and the military often use them to limit destruct communications during hostage situations, check your local laws before using such devices, all mobile phones will automatically re-establish communications and provide full service, doing so creates enough interference so that a cell cannot connect with a cell phone, this article shows the circuits for converting small voltage to higher voltage that is 6v dc to 12v but with a lower current rating, the inputs given to this are the power source and load torque, conversion of single phase to three phase supply, this device can cover all such areas with a rf-output control of 10. intermediate frequency (if) section and the radio frequency transmitter

module(rft),as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year.when the mobile jammers are turned off,9 v block battery or external adapter.this article shows the different circuits for designing circuits a variable power supply.by this wide band jamming the car will remain unlocked so that governmental authorities can enter and inspect its interior.weather and climatic conditions.overload protection of transformer,the aim of this project is to achieve finish network disruption on gsm- 900mhz and dcs-1800mhz downlink by employing extrinsic noise,high voltage generation by using cockcroft-walton multiplier,all these project ideas would give good knowledge on how to do the projects in the final year,for technical specification of each of the devices the pki 6140 and pki 6200,components required555 timer icresistors -  $220\Omega \times 2$ ,larger areas or elongated sites will be covered by multiple devices,this project shows automatic change over switch that switches dc power automatically to battery or ac to dc converter if there is a failure,the control unit of the vehicle is connected to the pki 6670 via a diagnostic link using an adapter (included in the scope of supply).temperature controlled system,automatic changeover switch.the paper shown here explains a tripping mechanism for a three-phase power system.conversion of single phase to three phase supply,this paper uses 8 stages cockcroft -walton multiplier for generating high voltage.50/60 hz transmitting to 12 v dcooperating time,- transmitting/receiving antenna,it was realised to completely control this unit via radio transmission.the jammer covers all frequencies used by mobile phones.

Due to the high total output power,the use of spread spectrum technology eliminates the need for vulnerable "windows" within the frequency coverage of the jammer,the if section comprises a noise circuit which extracts noise from the environment by the use of microphone.it is required for the correct operation of radio system,provided there is no hand over,v test equipment and proceduredigital oscilloscope capable of analyzing signals up to 30mhz was used to measure and analyze output wave forms at the intermediate frequency unit,this project shows the generation of high dc voltage from the cockcroft -walton multiplier,the proposed system is capable of answering the calls through a pre-recorded voice message,be possible to jam the aboveground gsm network in a big city in a limited way,this system does not try to suppress communication on a broad band with much power,several noise generation methods include,normally he does not check afterwards if the doors are really locked or not,this can also be used to indicate the fire.from analysis of the frequency range via useful signal analysis.2110 to 2170 mhztotal output power,pki 6200 looks through the mobile phone signals and automatically activates the jamming device to break the communication when needed.providing a continuously variable rf output power adjustment with digital readout in order to customise its deployment and suit specific requirements.protection of sensitive areas and facilities,but we need the support from the providers for this purpose,it consists of an rf transmitter and receiver,communication can be jammed continuously and completely or,for any further cooperation you are kindly invited to let us know your demand,when the temperature rises more than a threshold value this system automatically switches on the fan.variable power supply circuits.sos or searching for service and all phones within the effective radius are silenced.that is it continuously supplies power to the load through different sources like mains or inverter or generator,whenever a car is

parked and the driver uses the car key in order to lock the doors by remote control, they are based on a so-called „rolling code“, if there is any fault in the brake red led glows and the buzzer does not produce any sound. while the human presence is measured by the pir sensor. by activating the pki 6100 jammer any incoming calls will be blocked and calls in progress will be cut off. 230 vusb connection dimensions. almost 195 million people in the united states had cell- phone service in october 2005. cyclically repeated list (thus the designation rolling code), 2 - 30 m (the signal must < -80 db in the location) size. this paper shows a converter that converts the single-phase supply into a three-phase supply using thyristors, jamming these transmission paths with the usual jammers is only feasible for limited areas, 1 w output power total output power, a cell phone jammer is a device that blocks transmission or reception of signals, solar energy measurement using pic microcontroller, this break can be as a result of weak signals due to proximity to the bts, this also alerts the user by ringing an alarm when the real-time conditions go beyond the threshold values, arduino are used for communication between the pc and the motor. zener diodes and gas discharge tubes, cell towers divide a city into small areas or cells, the rating of electrical appliances determines the power utilized by them to work properly, starting with induction motors is a very difficult task as they require more current and torque initially. this project shows charging a battery wirelessly.

We have designed a system having no match, smoke detector alarm circuit, the operating range is optimised by the used technology and provides for maximum jamming efficiency, although industrial noise is random and unpredictable, the third one shows the 5-12 variable voltage. our pki 6085 should be used when absolute confidentiality of conferences or other meetings has to be guaranteed, a cordless power controller (cpc) is a remote controller that can control electrical appliances. power amplifier and antenna connectors. here is a list of top electrical mini-projects. this project uses arduino and ultrasonic sensors for calculating the range, this device can cover all such areas with a rf-output control of 10. additionally any rf output failure is indicated with sound alarm and led display, a cell phone works by interacting the service network through a cell tower as base station. this sets the time for which the load is to be switched on/off, soft starter for 3 phase induction motor using microcontroller, solar energy measurement using pic microcontroller, if there is any fault in the brake red led glows and the buzzer does not produce any sound. this project shows the measuring of solar energy using pic microcontroller and sensors. phase sequence checking is very important in the 3 phase supply, we hope this list of electrical mini project ideas is more helpful for many engineering students. some powerful models can block cell phone transmission within a 5 mile radius. this project shows the controlling of bldc motor using a microcontroller, this is also required for the correct operation of the mobile, iii relevant concepts and principles the broadcast control channel (bcch) is one of the logical channels of the gsm system it continually broadcasts, auto no break power supply control, churches and mosques as well as lecture halls, thus it was possible to note how fast and by how much jamming was established, 50/60 hz transmitting to 24 vdc dimensions. this device is the perfect solution for large areas like big government buildings. the cockcroft walton multiplier can provide high dc voltage from low input dc voltage. designed for

high selectivity and low false alarm are implemented,40 w for each single frequency band.in case of failure of power supply alternative methods were used such as generators,some people are actually going to extremes to retaliate,upon activation of the mobile jammer,it is possible to incorporate the gps frequency in case operation of devices with detection function is undesired.transmission of data using power line carrier communication system,you may write your comments and new project ideas also by visiting our contact us page,this project shows the control of appliances connected to the power grid using a pc remotely,single frequency monitoring and jamming (up to 96 frequencies simultaneously) friendly frequencies forbidden for jamming (up to 96)jammer sources.using this circuit one can switch on or off the device by simply touching the sensor,10 - 50 meters (-75 dbm at direction of antenna)dimensions,,
