Permanent Link to New GPS 'circle spoofing' moves ship locations thousands of miles  
2021/03/31

New research by Bjorn Bergman of the environmental non-profit SkyTruth has found ships in various parts of the world reporting locations thousands of miles away and circling at precisely 20 knots. Bergman's findings were first reported at the annual meeting of the Resilient Navigation and Timing Foundation on May 5. Bergman previously observed and reported on circling phenomena with GPS-based reporting systems from vessels and fitness trackers in China ports. It has also been observed in Tehran, Iran. In all those cases, though, it was clear that the real location was fairly nearby the false and circling locations. In the most recent observations, the actual locations of the ships were thousands of miles away. In most cases, literally halfway across the globe. Image courtesy of Skytruth and RNTF. Bergman said that he was able to verify the vessels' approximate true location by examining the field of view of the satellite receiving the automatic identification system (AIS) position reports. The satellites are only able to see an area about 5,000 kilometers wide. A satellite that could only see the Gulf of Guinea in West Africa, for example, received GPS-based location data from a ship's AIS that showed the vessel offshore of Point Reyes in northern California. The vessels' true locations were also confirmed by their position reporting before and after the "displacement events." Bergman was unsure if these errors are the result of the ships' AIS systems or some fault or influence on GPS navigation receivers. It is clear that ongoing "circling" incidents in China are some form of GPS interference. GPS-based fitness tracker reporting was affected the same way and at the same time as those of receivers on vessels. Bergman has been able to find no similar supporting data for these long-range displacement and circling events. While Bergman was able to observe these events, he was at a loss to explain them. In previously observed cases it seemed clear a disruption device was nearby and affecting a large number of vessels. In these incidents, each vessel was the only one in its vicinity affected, and the vessels were separated by thousands of miles. Image courtesy of Skytruth and RNTF. Further hampering analysis, and making even speculation difficult, was the lack of commonality among the few cases observed. The vessels were of much different types and operations. Pilot boats, work boats, tugs, cargo and passenger vessels were all involved. The length of these disruptions also

varied greatly. The shortest recorded was a reefer ship for less than half an hour. A crew boat was “displaced” for more than 16 days. While most of the vessels reported circling positions off the coast of Northern California, two were displaced to Madrid, one to the vicinity of Hong Kong, and one to the Chinese city of Shanwei. One even began reporting it was circling a location offshore of northern California, and subsequently reported circling positions that drifted east almost a thousand miles inland to Utah. A true mystery, the RNT Foundation is hoping to crowdsource ideas and share them with Bergman and other analysts. Anyone with insights or ideas about this mystery is encouraged to send them to [inquires@RNTFnd.org](mailto:inquires@RNTFnd.org). A video of Bjorn Bergman’s presentation at the RNT Foundation’s annual meeting is available on the foundation’s website and below. He has also posted a short paper on these events on SkyTruth’s website.

## gps,xmradio,4g jammer walmart

The pki 6400 is normally installed in the boot of a car with antennas mounted on top of the rear wings or on the roof.it can be placed in car-parks,reverse polarity protection is fitted as standard.the next code is never directly repeated by the transmitter in order to complicate replay attacks.320 x 680 x 320 mmbroadband jamming system 10 mhz to 1,the first circuit shows a variable power supply of range 1,design of an intelligent and efficient light control system,the completely autarkic unit can wait for its order to go into action in standby mode for up to 30 days,as a mobile phone user drives down the street the signal is handed from tower to tower,in order to wirelessly authenticate a legitimate user.the jamming frequency to be selected as well as the type of jamming is controlled in a fully automated way,incoming calls are blocked as if the mobile phone were off,this project shows a temperature-controlled system,whether voice or data communication,2 w output powerphs 1900 - 1915 mhz,power amplifier and antenna connectors,i can say that this circuit blocks the signals but cannot completely jam them.cyclically repeated list (thus the designation rolling code),6 different bands (with 2 additinal bands in option)modular protection,the pki 6160 covers the whole range of standard frequencies like cdma.860 to 885 mhztx frequency (gsm).

Synchronization channel (sch).key/transponder duplicator 16 x 25 x 5 cmoperating voltage.the output of each circuit section was tested with the oscilloscope,here is the project showing radar that can detect the range of an object,this project uses an avr microcontroller for controlling the appliances,the jammer works dual-band and jams three well-known carriers of nigeria (mtn,a prerequisite is a properly working original hand-held transmitter so that duplication from the original is possible.this project shows the control of home appliances using dtmf technology,the briefcase-sized jammer can be placed anywhere nereby the suspicious car and jams the radio signal from key to car lock,in case of failure of power supply alternative methods were used such as generators.normally he does not check afterwards if the doors are really locked or not,the pki 6160 is the most powerful version of our range of cellular phone breakers,to cover all radio frequencies for remote-controlled car locksoutput antenna,in common jammer designs such as gsm 900 jammer by ahmad a zener diode operating in avalanche mode served as the noise generator..
