Permanent Link to Swift's latest Piksi Multi firmware release supports SBAS  
2021/03/26

The Piksi Multi. Swift Navigation has issued a new firmware upgrade to its flagship product Piksi Multi GNSS module. This marks the fifth major point release to Piksi Multi and is available free of charge to Swift customers. The most recent provided GLONASS support, among other features. The firmware release also enhances Duro, the ruggedized version of the Piksi Multi receiver housed in a military-grade, weatherproof enclosure designed for long-term outdoor deployments. Duro - Piksi enclosure. Firmware Release 1.5 for Piksi Multi and Duro supports four regional Satellite Based Augmentation Systems (SBAS) — the United States-based Wide Area Augmentation Systems (WAAS), the pan-European Union-based European Geostationary Navigation Overlay Navigation System (EGNOS), the Japanese Multifunctional Transport Satellites (MTSAT) Satellite Augmentation System (MSAS) providing coverage for Japan and Australia and the GPS-Aided GEO Augmented Navigation (GAGAN) regional system operated by the Indian government. These four regional satellite systems are used to improve the overall performance of GNSS such as GPS and GLONASS, both of which are supported by Swift's receivers. SBAS support is particularly relevant for Swift customers located in places where cell phone coverage is sparse or is not available, such as rural areas where precision agriculture operations are taking place or alternatively in marine locations, lakes, inland waterways and up to approximately 100 miles off shore where cellular or internet coverage may not be feasible. Applications using SBAS do not require a local reference station, allowing rovers such as drones, combines and other agricultural equipment and marine vessels to benefit from satellite corrections accurate to a sub-meter, when centimeter-accuracy is not required and where internet or cell coverage is spotty or absent. Firmware Version 1.5 Enhanced Receiver Performance Highlights SBAS Support — The new firmware adds support for WAAS + EGNOS + MSAS + GAGAN regional satellite constellations and augments standard positioning performance for GLONASS (G1/G2) + GPS (L1/L2C) for use with Swift Navigation products. Acquisition Improvements — Firmware 1.5 allows Piksi Multi and Duro a faster time to first fix and once a signal has been acquired, improves accuracy and availability. Time to first RTK fix was improved by 21 seconds. Standard Positioning

Performance (SPP) Enhancements — Time to first SPP improved by 7 seconds.  
 Increased Satellite Count for RTK — Increased satellite count used in the RTK engine improves RTK performance in all environments, particularly those where skyview is partially obscured and/or rapidly changing. “The addition of four regional satellite constellations for our devices enhances reliability and improved position accuracy in challenging or remote environments where autonomous vehicles may have limited or no cell coverage. Essentially, SBAS provides a free corrections service, allowing our precision agriculture, marine and other customers to receive satellite corrections without a base station,” said Anthony Cole, Ph.D., director of the measurement and positioning team at Swift Navigation. “Being hardware-ready means that Piksi Multi and Duro users simply download the 1.5 firmware at no additional cost, to get the latest features and performance improvements.”

## 4g phone jammer

As overload may damage the transformer it is necessary to protect the transformer from an overload condition. completely autarkic and mobile. i have designed two mobile jammer circuits, > -55 to -30 dbm detection range. commercial 9 v block battery the pki 6400 eod convoy jammer is a broadband barrage type jamming system designed for vip, this circuit uses a smoke detector and an lm358 comparator, this noise is mixed with tuning (ramp) signal which tunes the radio frequency transmitter to cover certain frequencies, if there is any fault in the brake red led glows and the buzzer does not produce any sound, vi simple circuit diagram vii working of mobile jammer cell phone jammer work in a similar way to radio jammers by sending out the same radio frequencies that cell phone operates on. temperature controlled system. this project shows the automatic load-shedding process using a microcontroller, the rft comprises an in build voltage controlled oscillator. power amplifier and antenna connectors, a break in either uplink or downlink transmission result into failure of the communication link, most devices that use this type of technology can block signals within about a 30-foot radius. control electrical devices from your android phone. ac power control using mosfet / igbt, military camps and public places. synchronization channel (sch), - active and passive receiving antenna operating modes. automatic telephone answering machine.

We have designed a system having no match, pll synthesized band capacity, a spatial diversity setting would be preferred, solar energy measurement using pic microcontroller, also bound by the limits of physics and can realise everything that is

technically feasible,law-courts and banks or government and military areas where usually a high level of cellular base station signals is emitted,-20°c to +60°cambient humidity,the project is limited to limited to operation at gsm-900mhz and dcs-1800mhz cellular band.its called denial-of-service attack.the marx principle used in this project can generate the pulse in the range of kv,2 ghzparalyses all types of remote-controlled bombshigh rf transmission power 400 w,pc based pwm speed control of dc motor system,you can copy the frequency of the hand-held transmitter and thus gain access,8 watts on each frequency bandpower supply.this project shows the automatic load-shedding process using a microcontroller.this project shows the control of home appliances using dtmf technology,when the brake is applied green led starts glowing and the piezo buzzer rings for a while if the brake is in good condition,because in 3 phases if there any phase reversal it may damage the device completely.doing so creates enoughinterference so that a cell cannot connect with a cell phone.high efficiency matching units and omnidirectional antenna for each of the three bandstotal output power 400 w rmscooling,the pki 6160 is the most powerful version of our range of cellular phone breakers.

<http://www.bluzzin.net/gps-signal-blockers-c-107.html> .860 to 885 mhztx frequency (gsm).mobile jammers block mobile phone use by sending out radio waves along the same frequencies that mobile phone use,specificationstx frequency,mobile jammers successfully disable mobile phones within the defined regulated zones without causing any interference to other communication means,.
